Institutional Repository Procedure

Section 1 - Preamble

(1) Charles Darwin University ('the University', 'CDU') is committed to maximising the public value of its research outputs and supporting researchers in enhancing their scholarly profiles. This commitment is realised through the deposit of research outputs (including datasets) in the University's institutional repository, ensuring broad accessibility and long-term preservation.

(2) In accordance with the Open Access Policy, the University conforms to best research practice and complies with the open access requirements of the Australian Research Council (ARC) and National Health and Medical Research Council (NHMRC) and government reporting requirements.

Section 2 - Purpose

(3) This document outlines the procedure for depositing research outputs, as defined in the Open Access Policy, in the University's institutional repository.

Section 3 - Scope

(4) This procedure applies to all University staff, higher degree by research candidates and adjuncts and honorary appointees, where attribution is appropriate.

Section 4 - Procedure

(5) University research outputs must be submitted into the University's institutional repository for preservation and open access in accordance with the University's Open Access Policy.

(6) The University encourages the deposit of other works such as grey literature, works produced by staff prior to joining the University, and special collection materials or materials with cultural or historical significance.

(7) The Research Outputs team, in consultation with researchers, will ensure that research outputs deposited into the institutional repository will be made publicly accessible, as far as technical, copyright, privacy and contract restrictions allow. Publications that contain material to be commercialised, confidential or culturally sensitive information, or where the availability of the publication would infringe a legal requirement by the University and/or the author/s, are excluded from the procedure. Where research outputs are not able to be deposited or made open access, the University will maintain metadata records for these outputs.

(8) Where clarification is required as to how this procedure may be implemented in particular circumstances, advice should be sought from the Research Outputs team prior to submitting research outputs for publication.

Depositing research outputs

(9) The University encourages the deposit of research outputs into the University's institutional repository at the time

of submission of the accepted version of a manuscript to a publisher. The accepted version of a research output must be deposited even if this version will not become openly accessible.

(10) Research outputs may be deposited by upload to the institutional repository or by email to research.outputs@cdu.edu.au.

a. The University strongly encourages researchers to deposit research data with accompanying metadata into the institutional repository.
b. Subsequent revisions of an accepted version may also be deposited in the institutional repository by upload or email.

(11) In cases of multiple authorship, the first CDU author must deposit a copy of the accepted version to the institutional repository by self-service upload or emailing the Research Outputs team at research.outputs@cdu.edu.au.

(12) Further information can be found in the Strategic Publishing library guide.

ARC and NHMRC open access compliance

(13) The Research Outputs team will assist the researchers and the Menzies School of Health Research administration with:

a. submissions to government reporting exercises;
b. storage of metadata records and digitised publications in a retrievable and secure manner; and
c. ensuring metadata records and digitised publications meet the technical, confidentiality and other compliance requirements for storage, harvesting, archiving for reporting purposes.

(14) Researchers must ensure that publications arising from ARC or NHMRC funded projects are made openly accessible in accordance with the relevant funder open access policies, including depositing Author Accepted Manuscripts in an institutional repository (green OA), applying any required licensing, and making metadata publicly available within the required period.

Submission of HDR theses

(15) Higher degree by research students should forward electronic copies of theses and the CDU Thesis Deposit Agreement to the Research Outputs team in accordance with the Higher Degree by Research - Preparation, Submission and Examinations Procedure. Once processed, the Research Outputs team will upload the electronic copy of the thesis and the CDU Thesis Deposit Agreement to the institutional repository.

Research Outputs support

(16) Deposited outputs will be archived in the institutional repository for future reference and will only be made available on open access after the publisher embargo or other copyright requirements have been met.

(17) Self-service depositing enables self-archiving and provides authors a form to record specific access details and publication agreements.

(18) The Research Outputs team will check for embargo and copyright compliance before making the final record open access.

(19) The Research Outputs team will provide information and advice to authors to support the deposit of research outputs, including:

a. appropriate open access of outputs with author permission and in accordance with relevant legal obligations

and policy requirements;

b. which version of research output and which documentation to deposit;
c. how to deposit research outputs and related documentation in the institutional repository;
d. how to deposit relevant metadata for research datasets;
e. acquisition of publisher versions from publisher or other sites when appropriate;
f. indicating any pre-publication versions for potential readers;
g. information on how to retain the copyright of work and not assign exclusive rights to any third party; and
h. compliance with copyright and other legal requirements and open access principles as found in the Australian Code for the Responsible Conduct of Research, 2018, the ARC Open Access Policy and the NHMRC Open Access Policy statements.

(20) The version of record of a scholarly work may be deposited in the institutional repository in addition to the accepted version.

Copyright

(21) Depositing an item into the institutional repository does not affect copyright. The Research Outputs team will ensure material in the institutional repository complies with copyright and publisher agreements before making them publicly available.

Embargo periods

(22) Where an embargo period is imposed by copyright owners, authors and creators can still deposit research materials in the institutional repository. The Research Outputs team will ensure closed access pending the expiry of embargo periods and other legal obligations, then automatically make the materials visible and accessible in the institutional repository at the end of the embargo period.

Publisher permissions

(23) research data and primary research materials will only be made open access to the public with the permission of the owner of the research material. Authors and creators are responsible for confirming that deposited material in the institutional repository does not breach any agreement made with a third party in relation to the copyright. Where possible, the Research Outputs team will provide a link from the metadata to the article's location on the publisher's site.

(24) The Research Outputs team will check that the publisher allows author self-archiving before uploading deposited material to the institutional repository.

(25) In cases where a publisher does not permit self-archiving, depositors will be required to gain permission to deposit their material in the institutional repository.

(26) If there is any dispute over the appearance of a publication in the institutional repository, the Research Outputs team will remove the item until the dispute is resolved.

(27) If this permission is not provided, a full copy of the research material will not be accepted; however, a record of the publication metadata, including bibliographic information, must be provided.

Section 5 - Non-Compliance

(28) Non-compliance with governance documents is considered a breach of the Code of Conduct - Employees or the Code of Conduct - Students, as applicable, and is treated seriously by the University. Reports of concerns about non-

compliance will be managed in accordance with the applicable disciplinary procedures outlined in the Charles Darwin University and Union Enterprise Agreement 2025 and the Code of Conduct - Students.

(29) Complaints may be raised in accordance with the Complaints and Grievance Policy and Procedure - Employees and Complaints Policy - Students.

(30) All staff members have an individual responsibility to raise any suspicion, allegation or report of fraud or corruption in accordance with the Fraud and Corruption Control Policy and Whistleblower Reporting (Improper Conduct) Procedure.

Status and Details

Status	Current
Effective Date	13th February 2026
Review Date	13th February 2029
Approval Authority	Academic Board
Approval Date	13th February 2026
Expiry Date	Not Applicable
Responsible Executive	Steve Rogers Deputy Vice-Chancellor Research and Community Connection +61 8 89466890
Implementation Officer	Ksenia Sawczak Director Research
Enquiries Contact	Steve Rogers Deputy Vice-Chancellor Research and Community Connection +61 8 89466890

Glossary Terms and Definitions

"University" - Charles Darwin University, a body corporate established under section 4 of the Charles Darwin University Act 2003. The University is comprised of the various faculties, CDU TAFE, organisational units, and formal committees, including the governing University Council and Academic Board.

"Governance document" - means policy or procedure published in the Governance Document Library. Policies and procedures are collectively called ‘governance documents’ and are often referred to as ‘policy’ or ‘University policy’.

"Accepted version" - Accepted version means a manuscript that has been corrected after peer review and sent to a publisher for publication, including all changes made as a result of the peer review process, but excluding any editing, typesetting or other changes made by the journal or publisher. This is also known as a post-print. Sometimes a publisher may ask for further editing to an accepted version. For the purposes of deposit with the institutional repository, only the initial accepted version is required.

"Grey literature" - Grey literature means informally published written material such as reports, patents, and technical reports from government agencies or scientific research groups, working papers from research groups or committees, and white papers.

"Institutional repository" - Institutional repository means the software system for centralising, preserving and disseminating in electronic form, the knowledge generated by the University. The institutional repository is distinct from other services such as student course work, which operate on the same software.

"Metadata" - Metadata means the structured description of bibliographic data such as the title and authorship of a resource, for example, book, article, image or video in an institutional repository.

"Open access" - Open access means the availability of publications via the internet, such that any user can find, freely access, read, share, and reuse the publication. Sharing and reuse is facilitated through open licensing.

"Publisher version" - Publisher version or published version means the formally published version of a research output that includes publisher contributed copy-editing, proof corrections, layout, and typesetting. This is also known as the Version of Record. A publisher normally sends a copy of the publisher version to the author and this is known as the author version or author record.

"Research data" - Research data means all data which is created by researchers in the course of their work, and for which the institution has a curatorial responsibility for at least as long as the Australian Code for the Responsible Conduct of Research, 2018 and relevant archives/record keeping acts require, and third-party data which may have originated within the institution or come from elsewhere.

"Research Outputs team" - Research Outputs team means the team of Library and Office of Research and Innovation staff responsible for the management of the University's institutional repository.

"Research output" - Research output means original intellectual work that is validated by peers where at least one of the authors or creators of the research output or other eligible type of material is a University staff member or postgraduate student at the time of the deposit or at the time the work was produced.

"Version of record" - Version of record is the peer-reviewed, edited, formatted, and typeset version of the article, including any tagging, indexing, and other enhancements from a publisher. This is also known as the publisher or published version. A publisher normally sends a copy of the version of record to the author and this is known as the author version or author record.
